INNOVATIVE INKS FOR BANKNOTES

Banknotes are still in high demand as a method of transaction or store of value. Since technologies continuously evolve, our HelioNOTE range of inks is especially tailored for the production of banknotes and covers both the inks for all the relevant banknote printing processes as well as pigments that can be added to security threads.

HelioNOTE inks distinguish themselves from the competition by their printability, low waste levels and their durability on the final product. We offer the full range of banknote inks including for intaglio, offset, screen or numbering processes on all currently installed equipment. Apart from this we can also supply you with our highly durable overprint varnish. In terms of security, we can offer inks that have overt effects, like Colour Shift, covert features, like our Infrared ASPECT range, or special forensic properties for high-speed sorting machines, securing your banknotes at all levels.

Over the past decades our inks enjoyed an increasing interest from banknote printers and substrate manufacturers around the world and our technologies can now be found in banknotes that circulate in more than 50 countries.

We are convinced that we can help you to increase your efficiency and competitiveness when you use our technologies so make sure to contact us via sales@luminescence-scs.com
