IR LASER PEN METAL

The Luminescence Sun Chemical Security IR Laser Pen is designed to verify the presence of IR Fluorescing (Anti-stokes) material in inks printed on ID cards, tax stamps and other high-security documents.

Please see further information below:

- Input / Output Power: Input Power 100nm / Output Power 80mw
- Emission Wavelength: 980nm
- Power: 2 x AAA batteries to be replaced when necessary
- Guarantee: Readers should be checked on receipt and returned to Luminescence SCS if not operating properly. Defective readers will be replaced at no charge. Once the reader is tested and approved by the customer there is no further warranty on the reader during use.
- Usage Guidelines: Hold the button at the top of the pen down. The pen will then emit near-infrared ray of 980nm. The near-infrared ray excites IR Up-converting ink emitting a visible Green, Red or Blue ink depending on the ink printed.

For more information contact Luminescence Sun Chemical Security, where our advance technology team will be happy to assist you.
